EXPERIENCE

Launch Scout, Columbus, OH — *Software Engineer*

February 2022 - Present

Full-stack development in a contract position. Used a PETL (Phoenix-Elixir-Tailwind-LiveView) stack to deliver software. Created scripts to tear down and spin up a dev environment automatically. Created db tables, migrations, schemas, dealt with data layer and back-end. Wrote cards, including multi-card epics with instructions for when to cut dev branches and when to merge them. Made architectural decisions, such as exposing a single changeset and using it to deal with two tables at once in order to make a form work properly.

Freelance Consultant, remote — *Software Developer and Tutor*

January 2020 - PRESENT

Writes software for scraping websites and text analysis in Clojure. Authored the open-source [Periscope](https://github.com/caleb-bb/periscope) (<https://github.com/caleb-bb/periscope>) library for Elixir LiveView. Creates bespoke solutions for non-profits and companies for site migration. In an educational role: Teaches children, college students, and adult/professional learners coding and related topics, such as regexes, SQL, and Linux sysadmin skills. Also teaches set theory and symbolic logic.

Arid Software, remote — *Software Engineer*

October 2020 - March 2021 (1099 contractor)

Worked as a full-stack developer using Elixir and Phoenix, along with JS and React. Refactored and simplified code, added additional features. Wrote tests for untested code and used TDD for added functionality.

Education

We Can Code It, Columbus, Ohio — *Student*

January 2020 - April 2020

Completed a bootcamp. Worked with Java, Javascript, Spring Boot. Worked as part of a team, in person and remotely.
